06 Deployed Application

01 Elevator Pitch

Throughout this course, we have acquired a multitude of software skills that are applicable to a wide range of tasks. From creative endeavors such as designing UI elements and selecting visual fonts to functional aspects like implementing React and managing queries, our learning journey has been diverse and impactful. These skills have been instrumental in the development of our final project, a practical and valuable platform.

Our user-friendly application empowers you to effortlessly navigate every phase of your job search journey. Whether you're submitting applications or coordinating interviews with timely reminders, JobJourney ensures that all your essential information is conveniently accessible. This streamlined experience keeps your job search well-organized and you thoroughly informed at every juncture.

We are excited to present our project, the culmination of diligent effort aimed at creating the most user-friendly application. We believe that everyone can elevate their job search experience through our dedicated work.

Download the app now and take control of your future!

02 User Story & Motivation

As a job seeker,
I want to efficiently manage and track my job applications,
So that I can stay organized and informed throughout my job search journey.

The plan is to look for a job after our graduation and after having this bootcamp we are certain to be skilled developers. As a team we thought how we usually track our job applications... in Excel mainly.

There is no current free app that tracks what we've been up to with our job search so that's where JobJourney is born. Our main motivation was creating something that helps people experience a organized approach to managing job applications.

03 Technologies & Tasks

React | MongoDB | CSS | Node.js | HTML | GraphQL | JavaScript

Front End	Back End
Eva - Jessi - Nelly	Aly - Fer - Alex
(the whole team)	

03 Challenges & Successes

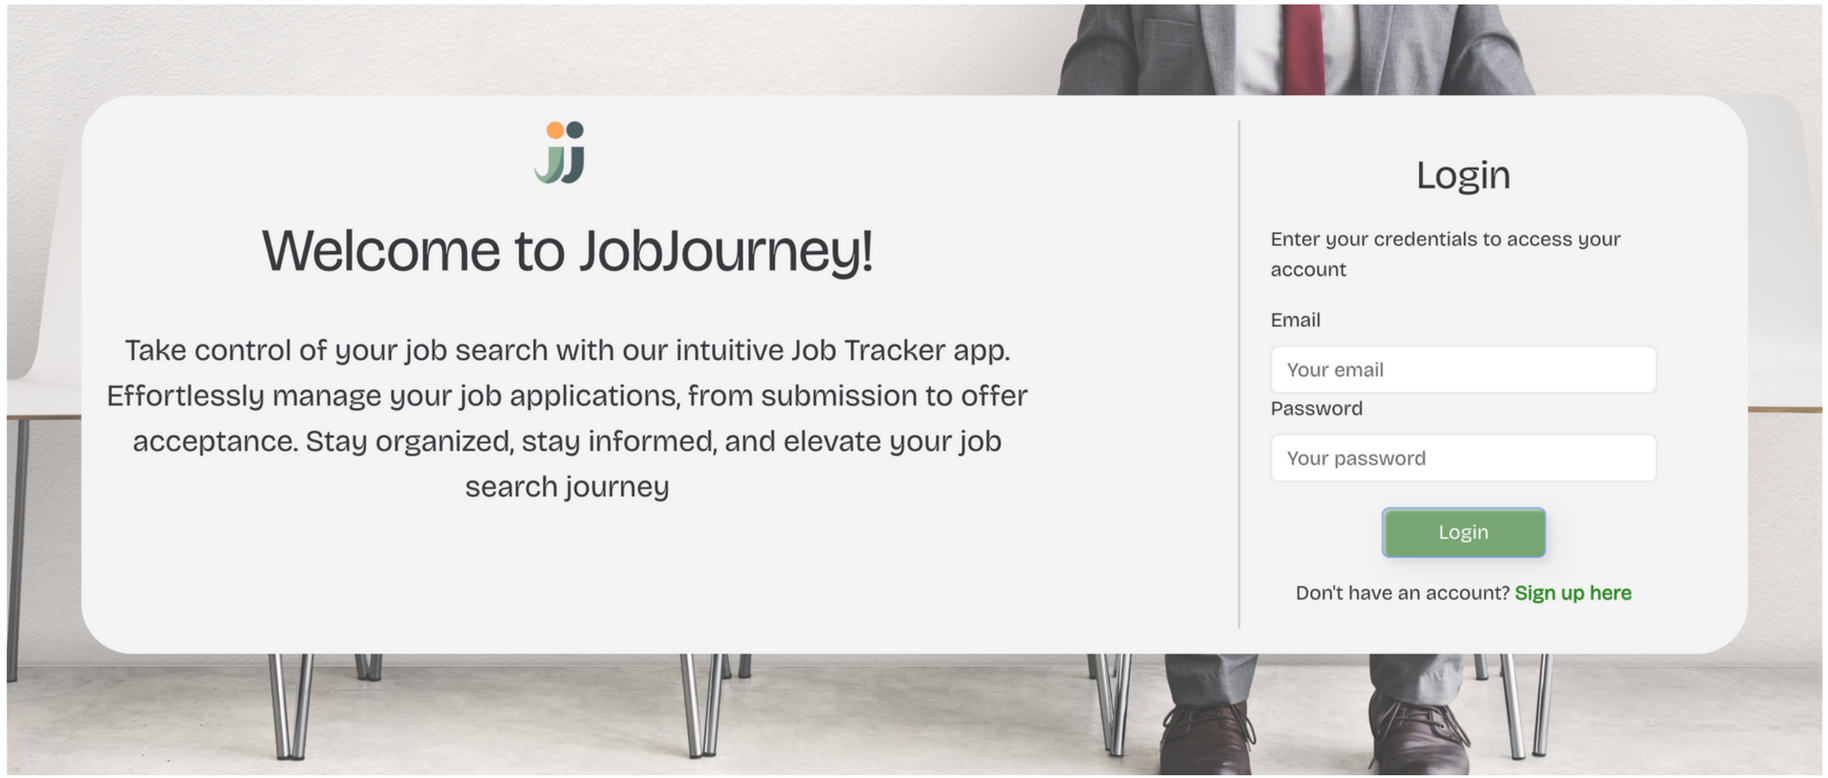
Challenges

As a team, the main things we struggled with were having to dig deeper with our knowledge and application of the technologies. Each one of us had defined strengths and when starting to work on the project even though we split in front-end and back-end, we still had involvement through the whole process. Learning new skills of software development always requiere to work out of our comfort zone and learn through trial and error.

Successes

Our top successes as a team with our project was to be able to deploy the idea we had since the beginning, as well many other new ones came up we were able to apply them in the platform and work through the application with improvements and new learning skills. Applying all the technologies and achieving the functionality is what we wanted for the users.

04 Demo



Welcome to JobJourney!
Take control of your job search with our intuitive Job Tracker app. Effortlessly manage your job applications, from submission to offer acceptance. Stay organized, stay informed, and elevate your job search journey

05 Future Development

While working with the application we certainly noticed several improvements that can be done:

- Add a **Dashboard button** on the header that will lead to a page with suggested courses according to the requirements of the application of job that the user applied to.
- Have a section where **Template cover letters are created** after having the information of the user's job career. This will allow to have
  a. most updated information in the professional side
  b. key-word changes on the CV according to the job application
  c. creation of any CV necessary depending on the user's requirements
- Have a **paid subscription** where the application can have integration with job boards or websites such as Linkedin, OCC, company's websites, etc. Make analysis on the applications and automatic comparison on the companies' salaries, location and skills needed.
